

A Synthetic Example of Evidence-Bounded Result Writing

Super Writer Tutorial

1 Scope

This document uses hand-authored synthetic teaching data. It is not a research finding and makes no claim of statistical significance or benchmark leadership.

2 Protocol

Each method is assigned 100 synthetic trials under clean and perturbed input. Success is reported as a count divided by total trials. Per-trial outcomes, uncertainty estimates, and runtime measurements are unavailable.

3 Results

Table 1 records all observations in the example. The candidate has descriptive success rates of 84% and 69%, compared with 82% and 61% for the baseline. These differences are 2 and 8 percentage points.

Condition	Baseline	Candidate
Clean	82/100	84/100
Perturbed	61/100	69/100

Table 1: Synthetic teaching counts, not real experimental results.

4 Limitations

The example supports only a descriptive comparison of two synthetic conditions. It does not establish significance or causal effects. Performance in other conditions and possible costs remain unknown.
